

ICT ACADEMY OF KERALA FSD CODING COMPETITION #2

Problem Statement

Create a Node/Express project with or without a database with the following features.

- Create a simple landing page with following inputs Name, Email, and a submit button and send-mail button.
- You need to create two pages. A landing page and a greeting page.
- On clicking the submit button in landing page the user must be taken to a page where he gets a page[greeting page] where he can find a beautiful UI which says “Happy 2022 from <Name>” . This URL has to be permanent and can be shared once created.
 - Use graphics, animations and iframes to make the page attractive.
- On clicking the send mail button : The user must receive an Email with the subject “Happy 2022” and the message body containing the URL of the Happy 2022 Wish page.

Have a thorough research and attempt this simple task and host this in Heroku platform and send your hosted link in our lark group.

SAMPLE

1. **Landing Page:** <https://diwali2021.herokuapp.com/>
2. **Greeting Page:**
<https://diwali2021.herokuapp.com/wish/618a128286d036315a1d649f>
3. **Mail:**

Happy Diwali Gokul External Inbox x

mydiwaliwishes@gmail.com
